## PROFESSIONAL SUMMARY

B.Tech Computer Science Engineering (AI & ML) student with three hands-on ML/Data internships spanning computer vision, search analytics, and forensic data visualization. Skilled in Python, Scikit-learn, feature engineering, and EDA. Seeking an entry-level Machine Learning Engineer / Data Analyst role to build data-driven models and drive measurable business impact.

## EDUCATION

|                                                                                                           |             |
|-----------------------------------------------------------------------------------------------------------|-------------|
| <b>B.Tech, Computer Science Engineering (AI &amp; ML), Kashi Institute of Technology, Varanasi, India</b> | 2023 – 2027 |
| ● 7th Semester / 4th Year — CGPA: 7.4 / 10                                                                |             |
| <b>12th (Intermediate), GIC Prayagraj, India</b>                                                          | 2022        |
| ● 64.6%                                                                                                   |             |
| <b>10th (High School), APIC Varanasi, India</b>                                                           | 2020        |
| ● 85%                                                                                                     |             |

## TECHNICAL SKILLS

- **Programming Languages:** Python, C, SQL
- **Libraries:** Scikit-learn, Pandas, NumPy
- **AI / ML:** Machine Learning, Deep Learning, Classification, Regression, PCA, ANN, Model Evaluation
- **Computer Vision:** OpenCV, Image Processing, Face Recognition
- **Data Analytics:** EDA, Data Cleaning, Data Visualization, Excel, Tableau
- **Web Technologies:** HTML, CSS, JavaScript
- **Tools & Platforms:** Git, GitHub, VS Code, Jupyter Notebook, Google Colab

## PROJECTS

|                                                                                                                                                                                           |                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| <b>Face Recognition System</b>                                                                                                                                                            | <i>Python, OpenCV, Scikit-learn, PCA, ANN</i> |
| ● Built a full PCA + ANN pipeline achieving 91% accuracy across a 40-class dataset during the i-STUDIO AI internship (details under Experience).                                          |                                               |
| ● Built an image preprocessing pipeline in OpenCV covering grayscale conversion and normalization to improve model input quality.                                                         |                                               |
| <b>Personal Portfolio Website</b>                                                                                                                                                         | <i>HTML, CSS, JavaScript</i>                  |
| ● Designed and deployed a responsive, mobile-friendly portfolio website using semantic HTML and CSS across 4 sections (About, Projects, Skills, Contact) to showcase projects and skills. |                                               |
| ● Structured the site with dedicated sections for projects, skills, and contact details for a clean, mobile-friendly layout.                                                              |                                               |
| <b>Smart Cricket Batting Assistant (In Progress)</b>                                                                                                                                      | <i>Python, Scikit-learn, Pandas</i>           |
| ● Building an ML-based cricket shot recommendation system as part of a 3-member team project, applying classification models to match situations to optimal shot choices.                 |                                               |
| ● Engineering features from match situation data (pitch, bowler type, field placement) and training classification models using Scikit-learn to generate AI-driven shot recommendations.  |                                               |

## EXPERIENCE

|                                                                                                                                                                                      |                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Machine Learning Intern, FlyRank (Virtual)</b>                                                                                                                                    | <i>Jul 2026 – Aug 2026</i> |
| ● Built and evaluated ML models for search intelligence using Python, Pandas, and Scikit-learn on a real-world SEO dataset of 30,000+ content pages.                                 |                            |
| ● Performed feature engineering and content-opportunity scoring to generate data-driven content optimization recommendations.                                                        |                            |
| ● Developed reproducible Jupyter Notebook workflows, visualized model performance, and managed the project via Git/GitHub.                                                           |                            |
| ● Repo: <a href="https://riteshy1526.github.io/flyrank-internship-ml">riteshy1526.github.io/flyrank-internship-ml</a>                                                                |                            |
| <b>Virtual Artificial Intelligence Intern, i-STUDIO (Remote)</b>                                                                                                                     | <i>Mar 2026 – Apr 2026</i> |
| ● Built a face recognition system using PCA for dimensionality reduction and an ANN classifier, achieving 91% accuracy across a 40-class dataset.                                    |                            |
| ● Worked on additional AI/ML projects covering classification and regression using real-world datasets, including data preprocessing, EDA, and model evaluation to improve accuracy. |                            |
| <b>Data Analytics Job Simulation, Deloitte Australia (Forage)</b>                                                                                                                    | <i>Oct 2025</i>            |
| ● Built a Tableau dashboard to visualize KPIs and cleaned datasets in Excel for a forensic case study.                                                                               |                            |
| ● Reviewed and prepared transaction data for a forensic technology engagement, then built visualizations to help the engagement team identify anomalies and trends.                  |                            |

## CERTIFICATION

- Artificial Intelligence Internship Certificate — iSTUDIO Technologies
- Certificate of Training, Artificial Intelligence — iSTUDIO
- Data Analytics Job Simulation — Deloitte (Forage)
- Generative AI & ML — NASSCOM Future Skills Learning
- YUVA AI for All — TCS iON (INDIAai)
- Cybersecurity Analyst Job Simulation — TATA (Forage)
- Introduction to Modern AI — EdCreate Foundation (CISCO)
- Generative AI for All — Springboard (INFOSYS)
